DETAILED ACTION

1. This application contains inventions drawn to patentably distinct species. Applicant is required under 35 U.S.C. § 121 to elect:

A) a **specific** second cell, such as a tumor cell or a virally infected cell,

B) and list all Claims readable thereon including those subsequently added. Currently Claims 13-14, 17-24 and 37-38 are generic.

2. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The different second cells comprise significantly different biological properties when cultured with dendritic cells. In particular, virally infected cells, e.g., HIV infected T cells, can infect dendritic cells and thus render them pathogenic, whereas tumor cells are not contagious and cannot infect dendritic cells. Therefore, the species are independent and patentable over one another.

3. Applicant is advised that the response to this requirement to be complete must include an election of the species to be examined even though the requirement be traversed.

4. Any inquiry concerning this communication from the examiner should be directed to Dr. Gerald Ewoldt whose telephone number is (703) 308-9805. The examiner can normally be reached Monday through Thursday from 7:30 am to 5:30 pm. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (703) 308-3973.
